

SWS-100™

PATENTED STATIONARY WASHING SYSTEM

CANADIAN PATENT # 2,649,040 - UNITED STATES PATENT # 8,511,325

The GINOVE **SWS-100™** washing unit is the most productive and economical trash-can cleaning system on the market.

In only 45 seconds, the **SWS-100™** equipped with our unique water spray nozzles design clean the inside of the cart, including compost carts with the mesh screen bottoms! The outside and the lid can be cleaned with the pressure washer machine before or after the washing cycle.

The GINOVE water separation system allows for draining recycled water into the sewer system, the solid waste collected at the bottom of the unit is easily removable and may be used as compostable.

The **SWS-100™** Standard is equipped with a cart tipper which perfectly positions the cart over the nozzles assembly and returns the cart to its original position.

The **SWS-100™** Standard is compatible with any 4 GPM pressure washer machines (it is recommended to use a 4 GPM pressure washer unit).

With the **SWS-100™** risks of injuries are minimal.

SWS-100™ SERIES

- Semi-automated cart tipper
- Adaptable to 120L-360L carts
- GINOVE filter system
- GINOVE Water gallonage required 3-5 gpm
- 230V/3hp/1ph electric motor
- Control panel
- Hydraulic rotating water nozzles system

SWS-100™ FEATURES

- Clean inside the carts
- 45 seconds cycle time
- Productivity of up to 55 carts/hour
- Cart tipper cycle allowing drainage inside the hopper
- 360° rotating water nozzles for maximal performance

SWS-100™ OPTIONS

- Pressure washer unit available on option
- Universal cart tipper for North American or European carts styles
- Other voltages available on request
